

After the Story: No Closed Lid

by Douglxss Burley Johnson

A companion study to *The Planetarium Tooth*

Back to the Easton Fire

Pull that dry maple in before the river damp gets into it. We're going back to Scott Park on the Easton side of the Delaware, where the Lehigh comes in hard and the Free Bridge lamps throw a yellow strip toward Phillipsburg. Cold comes up off the confluence. Scrap maple catches in a brick ring. Two men sit with unfinished business between them.

Jonah Derr is twenty-two when he tells it, but the April night that matters he was eighteen at Nurture Nature Center on Northampton Street, helping the science club haul an inflatable planetarium dome into the education hall. Kids got stamped tickets and a star chart with APRIL 12 in Ms. Vargo's block print. Jonah held the dome seam while Tyler Brandt pinned the floor skirt.

You need to know Tyler. Thick from crew. He believed in science the way some men believe in a locked tool chest: if the latch closes, the job is done. God was optional. He used explained the way a man uses a finished sentence. Once a mechanism had a name, the case was closed.

The projector carried a plastic gear tooth under a clear cover. Ms. Vargo warned them: if it sticks, don't force it. A faded co-op sticker on the case still carried a coffee smear across the barcode. That coffee smear is one of the true things in this story, and it does no other work except sit there.

At the public show a little girl in a pink coat asked if God put the stars up. Tyler laughed through the mic. Science put the map together. Explained. Next question. Then the season-change cue hit. The sky froze on a winter belt while every lap chart said April. Ms. Vargo called from the flap: Jonah. Hands.

Jonah crawled to the cradle. He backed the wheel off. The tooth came free with a hairline crack. He did not reseal it. We're done with the motor. Charts out. Coats on. Outside at Scott Park, Tyler's battery pack had gone flat until he swapped it. Then he turned on Jonah in the bridge

light. You made a scene over a gear. That's a gap talking. We name the gap, we close it. That's what explained means.

Jonah opened his hand. Science is a good servant for the how. It told them the wheel was binding and the pack was flat. It did not tell them why there is a sky to map, or why a question keeps standing after the mechanism has a name. You used explained like a lid. Tyler said it plain as a stamped ticket: I'm not converting. I like the maps. I don't like the Mapper. Jonah left the cracked tooth on Ms. Vargo's desk in a paper cup with a note: DO NOT FORCE / REPLACE RING. She taped the cup to the case and locked the closet.

That night by the fire Tyler came late. You keep your tooth. I'll keep my lid. They did not settle the veil. Tyler stayed Tyler.

Tonight we're going to sit with that Easton fire and ask what a borrowed word sounds like when a man's hands are forcing a gear, and what John Lennox confirms in *Can Science Explain Everything?* when he names the same lid.

Questions to Sit With

1. Read Psalm 19:1-4, where the heavens declare the glory of God and the sky pours out speech without a human voice. Under the dome Tyler treated a mapped sky as a finished case. Outside at Scott Park the April chart and the real dark still stood after the motor died. What does a closed lid do to a sky that keeps speaking after the projector tooth cracks?
2. Read Romans 1:19-20, where what can be known about God is plain in what has been made, so men are without excuse. Tyler named mechanisms and called the naming explained. Jonah's hands backed the wheel off and walked the coats to the rail. What does explaining the how leave standing when the why keeps asking after the gear has a name?
3. Read Job 38, where the Lord answers Job out of the whirlwind and asks who laid the earth's foundation and who can bind the chains of the Pleiades. Tyler said a stuck tooth does not open a theology. Jonah left him unconverted by the coals with the tooth in a paper cup. What do your own hands do with the lid when a friend still wants every why shut by a finished how?

The Teaching: No Closed Lid

Start where Jonah started. Not with a campus stage. With a stuck projector tooth, a star chart dated APRIL 12, a flat battery pack, and a cracked white plastic piece in a paper cup.

Tyler Brandt is not a cartoon villain. He bolted the projector. He narrated Orion cold. He will get mad when a chart lies about the month. Mad needs a real line. Tyler wants explained to screw down tight when it helps him shut the question, and God optional when a Person would cost him the tidy word. John Lennox opens the same lid with plainness that fits a Scott Park rail. He names the claim many of us swallowed without tasting it: "At some stage in the future, science will be able to explain everything, and answer all our needs" (Lennox, Introduction). That sentence is Tyler's lid in print. Explained means finished. Leave the hymns for the people who can't read a chart.

Hold that against the dome.

Lennox will not let the lid stay. "It is also wrong to suggest that science is the only way to truth" (Lennox, ch. 2). "That idea, which is widespread today, is a belief called 'scientism'" (Lennox, ch. 2). Scientism is not science. Science maps the how. Scientism borrows the prestige of the map and claims the map can close every why. Tyler used the servant like it was the Master. Forcing the ring would have chewed the unit so the word explained could stay tidy. That is a lid talking, not a tool.

Walk the cake the way Lennox walks it, because Tyler wants the ingredients to answer the baker.

Lennox asks us to imagine Aunt Matilda's cake under the world's best labs. Then the real question lands: "Now we know how the cake was made and what it is made of, but suppose we now ask the scientists why the cake was made?" (Lennox, ch. 2). Aunt Matilda knows. The labs do not. "Unless she reveals the answer, they will never know" (Lennox, ch. 2). "The natural sciences can cope with questions about the nature and structure of the cake, but they cannot answer the 'why' question of purpose" (Lennox, ch. 2). Science has its limitations. The dome was Tyler's cake under analysis. Fusion. Distance. Gravity wells. Good servants. They never told him why there is a sky to map. The how still mattered. The how was never the whole sentence.

Now the gap charge, because Tyler threw it first.

You think a stuck tooth means the universe has a Person in it? That's a gap talking. Lennox has heard that move until it wears a groove. Men invent a temporary god for the blanks science has not filled yet, then cheer when the blank shrinks. Lennox refuses to let the God of the Bible be stuffed into that blank. "The God of the Bible is not a god of the gaps. He is the God of the whole show" (Lennox, ch. 2). Jonah was not hiding God in a plastic burr. Naming the motor's bind did not close the sky.

Watch Newton, because Tyler wants mechanism to retire the Maker.

Lennox puts Newton and Hawking in the same Cambridge chair three hundred years apart. Newton's move is the one Jonah's hands already practiced. "When Newton discovered his law of gravitation, he didn't say, 'Now we've got a law of gravity, we don't need God'" (Lennox, ch. 2). "And the more Newton understood the way the universe worked, the more he admired the genius of the God who made it to operate in that way" (Lennox, ch. 2). More light on the how. More wonder at the Maker. Tyler treats a finished mechanism like a finished case. Newton treated a finished mechanism like a cleaner window.

Hold the law of gravity next to the cracked tooth.

Lennox says the confusion is about what scientific explanation even is. The law of gravity "does not tell us what gravity actually is" (Lennox, ch. 2); it tells only how it operates. Jonah freed a tooth and swapped a dead pack. Those were how-jobs. Good ones. They did not answer why a question kept standing after the mechanism had a name. "The key point here is that science does not compete with God as an explanation. Science gives a different kind of explanation" (Lennox, ch. 2). Servant beside Master. Map beside Mapper. Chart beside sky. When Hawking tried to make gravity retire the Creator, Lennox says he "has signally failed to answer the central question" (Lennox, ch. 2) of why a universe exists at all. The lid still sits loose in the hand.

Scripture keeps the same pressure without a translation quote in our mouths. The heavens declare glory, and the sky pours speech without words (Psalm 19:1-4). What can be known about God is plain in what has been made (Romans 1:19-20). The Lord answers from the whirlwind and asks who laid foundations Job never laid (Job 38). Jonah heard those claims the way a tooth guy hears a gear bind: accept the open why or keep forcing a lid the tool never earned. Science can explain

a great deal. Science cannot, even in principle, explain everything. Aunt Matilda's grin still sits outside the lab report.

The veil stayed unanswered that night under the Free Bridge lights. Tyler said it plain as a stamped ticket: I'm not converting. Jonah left him there. We do not settle Tyler's file for him. We settle the lid. Explained. How. Why. Science is a good servant for the how. Using it to shut every why is borrowing a bigger word than the tool earned. Tape the cracked tooth into the paper cup when your hands are done. Leave the note where the morning shift can read DO NOT FORCE / REPLACE RING.

Around the Fire: Talk It Over and Take It Home

Talk about the Tyler in your crew, or the Tyler in your own chest. The man who will praise the map and call the naming a closed case, and who will wave God off when a Person would cost him the tidy word. Say out loud which whys you have been shutting with a finished how. Jonah and Lennox are on the same side of that question. Keeping the servant while throwing out the Master will not make the chart true when the sky refuses the motor.

Talk about Jonah's tools. He did not win Tyler with a speech. He backed a wheel off, held a cracked tooth, walked coats to Scott Park, and left a note in a paper cup. Where do you still try to argue a man into wonder when his hands have not held the open why yet? Where do you need to quit being somebody else's Holy Spirit and leave the true sky over the rail?

Talk about the unanswered veil and the unconverted friend. It is all right that Tyler walked back up Larry Holmes and kept his lid. Scripture did not appoint Jonah to close Tyler's file that night. What Scripture did give us is a sky that keeps declaring, a Maker plain in what has been made, and a whirlwind that still asks who laid the foundations. That is enough wood for one fire.

Try this, this week. Read Psalm 19:1-4, Romans 1:19-20, and Job 38 out loud, slow, with a pencil in your hand. Write a short margin: HOW IS A SERVANT. WHY STAYS OPEN. NO CLOSED LID. Then write EXPLAINED on one side of a scrap and LID on the other. Ask which side your mouth has been living on when a mechanism gets a name and a question still stands. If you have been forcing the ring so the word stays tidy, set the tooth back in the cup in prayer and tell the truth about the open why. Learn Psalm 19:1 by heart as a paraphrase you can say by a

river: the heavens declare God's glory. Put another piece of maple on. And when a friend stays
Tyler, leave the cracked tooth where the fire can see it, and refuse the closed lid.
